

# Surf Easy

## Disk Cloning & Image Creation Service

With the Surf Easy Disk Cloning & Image Creation Service we will setup your first internet cafe PC for you, and then create a copy of that PC (called an "image") which you can use to make identical installations onto other PCs. The imaging process takes minutes, giving you the fastest way deploy new internet cafe PCs, all with an identical setup and configuration.

The Surf Easy Disk Cloning & Image Creation Service is the fastest way to deploy multiple Surf Easy Internet cafe terminals all with an identical setup

## What is it?

Our Surf Easy Disk Cloning & Imaging Creation Service is an installation service where we setup one of your PCs with the perfect Surf Easy installation, and then create a “photocopy” of your that PC (called an “image”) which you can then use to clone onto your other PCs and as a backup should any PC become corrupt in the future. This allows you to quickly deploy multiple internet terminals all with an identical setup in a fraction of the time it would take to install the software on each one individually.

Disk Cloning or Disk Imaging is a process commonly used by IT professionals to deploy an exact copy of a setup onto multiple PCs. For example, consider an office with 100 staff. Rather than having a tech manually install Windows and all the other programs on each staff member’s PC, they instead set everything up on just one PC and then make a copy of that (called an “image”) which they can then clone onto all the other PCs in a matter of minutes.

## How does it work?

You send us one of your PCs, and our technicians meticulously prepare it by installing Windows, Surf Easy, and dozens of third party user programs. They will also install all your hardware drivers, configure security, and streamline the PC for improved speed and performance. They will configure your preferred settings, pricing, logo and rebranding. In short, they will setup your PC with everything it needs ready for the end-user.

Once the machine is 100% ready, our technician then takes a copy of the PC in a process known as “imaging” so that you have a permanent copy of the PC which can be used to clone onto other identical PCs.

We then ship you back your PC, the new image file, and the imaging software and instructions. Armed with this kit, and using the included Acronis True Image software, you can then fully install a new PC for your internet cafe or internet kiosk in a fraction of the time that it takes to normally install a machine from scratch. This saves you hours of work!

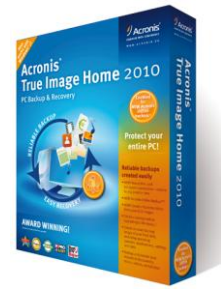

## What’s included?

The Disk Cloning & Image Creation Service includes all of the following:

- ✚ Once we receive your PC from you we then install Surf Easy and all the user applications, and generally prepare the PC to your exact requirements.
- ✚ We then create the source image of the PC.
- ✚ We provide a 320GB external USB hard-drive pre-loaded with the image files, an export of your configuration, instructions, and other settings files for future use when you deploy your other terminals.

- ✚ Acronis True Image Home 2010 licence
- ✚ Acronis True Image Home 2010 boot CD and install CD
- ✚ Detailed step-by-step instructions specific to your PC model

## Price

The Surf Easy Disk Cloning & Imaging Creation Service is \$495 per image.

If you already have an image/clone source file, you may need to have it updated to include all the latest Windows & third-party updates, Surf Easy updates, latest drivers, and to change your default settings and configuration. Having an up to date image reduces the post-image deployment time and ensures that you have the “latest and greatest” services available to your clients. Just ship us your PC & existing image file and we will do the rest. The price for the image update service is \$325 per image file.

### **IMPORTANT – PLEASE NOTE THE FOLLOWING:**

An image will only work with one particular model of PC, and therefore one image is required for each unique model of PC. If you have different models of PC, or if your PCs have different hardware specifications, then you will need an image to be created for each PC individually.

Please note that the Image Creation Service does not include a Windows licence or Surf Easy licence. You will still have to hold or purchase a valid Windows licence and a valid Surf Easy software licence for each PC you clone.
